

CHAIN LINK ADJUSTERS

We manufacture a diverse range of chain link adjusters, custom-engineered to meet the specific requirements of the maritime sector.

Chain adjusters allow for fine-tuning of the length in chains used to secure vessels, offshore platforms, buoys, and other floating structures. We also offer shock absorber variants designed to dampen sudden forces created by waves and wind, which helps to reduce stress on the entire mooring system.

With our comprehensive in-house capabilities, including heavy bending, ring forming, and flash butt welding, we can provide complex mooring and anchoring solutions for critical maritime applications using a wide range of materials, including stainless steel.

Brooks Forgings is proud to be a preferred and specified manufacturer in the marine, waterways, and dockside sectors. Please contact us today with your exact requirements.
