

GALVANISED FASTENERS

We offer a limited range of galvanised fasteners from stock and offer the finish as standard for many bespoke made components.

Galvanised fasteners offers exceptional corrosion resistance, making them the ideal choice for outdoor, marine, leisure and other exposed applications.

Galvanising is a coating proven to withstand the elements, providing a secure and long-lasting fastening solution for your projects.

Alongside our standard bolting range, we also have the capability to manufacture special fasteners to customer design and put them through the galvanising process at one of our approved service providers.

Due to hydrogen embrittlement concerns, galvanising is only recommended for grades 8.8 and below.
