

POWER GENERATION

We manufacture custom-engineered forged, machined, and fabricated components designed to meet the rigorous specifications of the global power generation industry.

We manufacture the custom-engineered components that keep the energy industry moving. By aligning our forging, machining, and fabrication processes with your specific requirements, we produce parts that thrive under the extreme pressures of thermal, nuclear, and renewable energy environments. Whether it is a specialised fastener or a critical valve component, we turn your technical requirements into reliable assets for the power generation industry.

EXAMPLES OF BESPOKE FORGED COMPONENTS

- Bespoke Fasteners
- Overhead Powerline Fittings
- Valve Bodies
- Cover Forgings
- Disc Forgings
- Forged Turbine Blades
- Adaptors
- Rotors & Shafts
- Bearing Blocks
- Nozzle Blocks
- Flanges
- Tee Pieces & Elbows
